TARTAR PREVENTION

How does tartar form, and what does it do?

Plaque is a gummy substance that forms on the teeth within a few hours after a meal. Within twenty-four hours, plaque hardens into tartar.

Tartar is harmful in two ways. First, it serves as a place where bacteria can reside and multiply in the mouth. There is substantial scientific evidence that bacteria from tartar are absorbed into the blood stream and deposited in various organs. Heart and kidney disease often result. Second, tartar builds up along the gum line. As the tartar enlarges, it pushes the gums away from the roots of the teeth. The bacteria associated with tartar cause infection and inflammation, which can cause the destruction. Eventually, the teeth will loosen and fall out.

Eventually, the teeth will loosen and fall out.

How can I prevent tartar formation on my dog's teeth?

After your dog's teeth have been cleaned, we recommend beginning home dental care to help reduce plaque and tartar buildup.

Feed your dog a veterinary-approved dental diet or a premium diet with scientifically proven tartar-reducing ingredients. These diets have been shown to greatly reduce plaque formation and tartar buildup. These diets contain unique additives and specially designed kibbles that interfere with plaque development. By limiting plaque as it forms, tartar development is greatly diminished.

Brushing your pet's teeth is another effective means of removing plaque before it turns into tartar. We recommend using a toothpaste made especially for dogs. Brushing should be done at least twice weekly (preferably daily), but we understand that not all dogs will tolerate it. Special finger brushes are made that make this task easier for you and your pet.

Use a daily oral rinse. This type of product helps reduce the bacterial count in the mouth, resulting in improved breath.

Having us perform a prophylactic teeth cleaning every six to twelve months or at the first sign of tartar buildup is very beneficial to most dogs. This will prevent damage to the gums and roots.
